LION Doctors United for Worldwide Education

A two-day advanced e-learning program
in Otolaryngology & Neurotology

May 18-19, 2020

As a result of the exponential spread of SARS-CoV-2 or Covid-19 we enter uncharted waters, both for our profession and our species. The medical profession has the ability to lead us through this troubled Corona virus period. It has the difficult task of empathising and supporting colleagues in the acute specialties who are in the front line to deliver timely care to existing patients. However, we must not lose sight of the ongoing importance of medical education, because of its importance to the future of the highest quality health care.

We all know the world has become a very different place compared to just a few short weeks ago.

LION believes that we should encourage the utilization of the technology that we have played such an integral part in developing as a vital component in the continued delivery of medical education. Whilst it is unlikely that the current situation will allow live surgical demonstrations that were in an advanced state of planning for our upcoming May broadcast we believe that we should use the time, set aside, to set up a global conference on Otolaryngology and Neurotology with a participation of a group of experts in this field from all continents.

LION feels gratitude for the continued support of our loyal sponsors who share the importance of medical education.

Please sign up at www.lion-web.org for joining us via the free interactive LION conference rooms. All you need is a laptop or cell phone to follow us and ask questions live to the surgeons from home or from your office

Please share this information with your colleagues!
